External O-Ring Kits

In November 1998, DIPACO released the DT730024 (formerly DF8TZ-9229-AA) external o-ring and seal kit for Ford Power Stroke HEUI injectors. The kit includes the external o-rings, seals and gasket required to install one injector. Now, as shops begin repairing these injectors, we are releasing an o-ring and seal kit for rebuilders. The kit, part number DPS0008-100, includes 100 pieces of each o-ring, seal and gasket at a significant price savings to the fuel shop.

Following is a description of the DT730024 kit components. The DPS0008-100 contains 100 pieces of each component.

Back-up O-Ring (Steel)	1 each
Cushion Ring (Black with Blue Dot)	1 each
Upper Injector O-Ring (Blue)	1 each
Cushion Ring (Blue and Black)	1 each
Lower Injector O-Ring (Orange)	1 each
Injector Gasket (Copper)	1 each

Internal O-Ring Kits

To help the injector rebuilder we also now have available an internal o-ring kit which comes in single and 100 injector quantities. DPS0007 contains the three internal o-rings needed in the injector. DPS0007-100 contains 100 pieces of each o-ring, again at a significant savings.

Following is a description of the DPS0007 kit components. The DPS0007-100 contains 100 pieces of each component.

DPE7407 O-Ring (Black)	1 each
DPE7736 O-Ring (Green)	1 each
DPE7738 O-Ring (Brown)	1 each

The DPE7407 o-ring installed into a groove in the internal adapter plate. The DPE7736 and DPE7738 o-rings are installed onto the piston and valve body.
