

**Lifetime Warranty
On The DTech Pump
Mounted Driver For GM
6.5L DS Fuel Pumps**

Nearly a decade ago, when DTech reinvented the pump mounted driver (PMD) for the GM 6.5L DS pump, every aspect was analyzed and reengineered to combat the number one enemy: engine temperature.

We were able to offer you a superior product at a more affordable price than Stanadyne. Now we've gone one step further: Each PMD comes with a lifetime warranty*.

Over the years, we found more and more ways to improve our PMD. For instance, the DTech PMD pad is now made from special fiberglass reinforced material for improved thermal performance over the Stanadyne pad.

The DTech PMD also has additional clearance between the PMD and the intake manifold on the 6.5L van applications. The notched area on the top of the PMD now runs across the full length of the PMD. This allows the injection pump to have a greater range of rotation when setting the pump timing.

We hope you'll never have to replace your PMD but these increasingly older applications are extremely susceptible to heat. The hotter it gets, the more problems can occur. At least you know no matter what happens, when you buy a DTech PMD it's covered for life.
