

**DTech Remanufactured  
GM 6.6L Duramax LBZ  
+ LMM Injectors**

DTech now offers remanufactured injectors for the GM 6.6L Duramax LBZ and LMM engines. Part number DT660003R covers the LBZ and late LLY engines, model years 2006 – 2007. Part number DT660004R covers LMM model years 2007 – 2010. Please refer to the DTech Product Guide for specific application information.

Each injector is completely disassembled; each component goes through a cleaning process, detailed inspection and all worn components are discarded. A new nozzle, new control valve, new internal seals and new external seals are used in every injector.

All assembly and key characteristics, including flow and response times, are checked to meet DTech specifications. An injector quantity adjustment code (IQA) is generated from the fuel delivery tests and laser marked on each injector.

See Product Bulletin FI-348 for more information on the injector quantity adjustment code (IQA) and the procedure to enter it into the Engine Control Module (ECM).

All DTech injectors are backed by our two year, unlimited mileage warranty\*.
