

**Injection Lines For
GM 6.6L Duramax LB7
Applications**

DTech now offers new injection lines for the GM 6.6L Duramax LB7 engine used in model year 2001 – 2004.5 applications.

On the LB7 engine, it is common for corrosion to occur around the line and nut area. Reuse of the injection line increases the possibility of introducing contamination into the injector risking a premature failure.

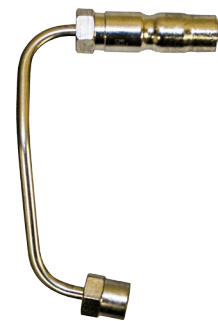

One option is to clean the lines per the GM technical bulletin however, this is a time consuming process with its own risks of introducing contamination into the injector.

Use of the new DTech injection lines saves cost vs. an OE line and frees up labor for more profitable jobs. Part numbers and cylinder reference can be found below.

Part Number	Cylinders	Reference Number
DT660030	1 + 8	97188720
DT660031	2 + 7	97188723
DT660032	3 + 6	97188721
DT660033	4 + 5	97188722
