

## Ford 6.0L Oil Cooler Gasket Kit

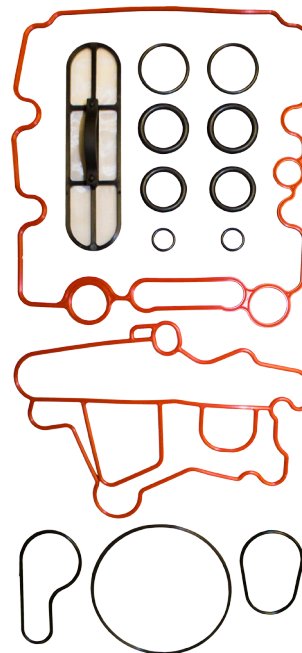

DTech now offers an oil cooler gasket kit for Ford 6.0L applications, covering model years 2003 – 2010 (see below). Part number for the kit is DT600023.

The kit contains all of the necessary gaskets, seal rings, o-rings, and a high-pressure oil pump (HPOP) inlet filter screen necessary to remove and reinstall the oil cooler.

Anytime the HPOP is replaced it is recommended to remove the oil cooler assembly. This allows the HPOP supply reservoir to be cleaned and its inlet filter screen to be replaced. It is common with use of low quality oil filters and an extended oil service interval for contaminants to build up in the reservoir and restrict the inlet filter for the HPOP. If the HPOP oil inlet filter restriction becomes severe, the filter will break up with the pieces going through the HPOP resulting in damage to the pump and IPR.

See below for complete application information covered by the kit.

<b>Model Year</b>	<b>Application</b>
2003 - 2007	F-Series 250-550, Excursion
2004 - 2010	E Series
2003 - 2007	VT365
2006	VT275
2006 - 2010	LCF 4.5L
2007 - 2010	MaxxForce 5
