Increased value

- Reduce BOS cost with high power bin
- Low thermal coefficients for greater energy production at higher temperature
- Extended temperature range enables operational efficiencies

Half-cell design brings higher efficiency

- New cell string layout and split J-box location reduces the energy loss caused by inter-row shading
- Integrated LRF(Light Redirecting Film) to enhance power, specially for ground-mount applications (optional)
- Lower cell connection power losses due to half-cell layout (120 monocrystalline)

Highly reliable due to stringent quality control

- Over 30 in-house tests (UV, TC, HF etc)
- Increased module robustness to minimize micro-cracks
- PID resistant and free of snail trails
- Internal test requirement of Trina more stringent than certification authority

Certified to withstand the most challenging environmental conditions

- 2400 Pa negative load
- 5400 Pa positive load
