Includes one M3 hex key . Use existing GigaPan screws to install GP-CB.

**Saves 4.7oz (133g) over original Platform + Camera Rail

Really Right Stuff compatible clamp with safety stop relief grooves

Lock Knob

Mounting holes

MAINTENANCE

GENERAL CARE

The GP-CB is finished with a protective anodize plating that protects it from corrosion and mild abrasion. It will not protect it from scraping or dropping on rocks/concrete/etc. Take precautions to prevent your Clamp Jaw assembly from getting fouled in mud, dirt, or sand, especially inside the Lock Knob. If fine sand/grit fouls the assembly, rinse with fresh water and then thoroughly dry.

LUBRICATION

The exposed threads of the Lock Knob assembly may require periodic lubrication to keep the knob travel smooth. Apply a very light grease to the exposed threads and wipe off all excess to prevent the attraction of dirt and grit.

1 Remove Gigapan Camera Platform

Remove all 4 screws on both sides of the Camera Mounting Platform with included hex key.

* Save the screws, they will be reused to attach your Really Right Stuff GP-CB.

2 Install Really Right Stuff GP-CB

Secure the GP-CB into place using original mounting screws.

3 Mount Really Right Stuff Nodal Slide

Really Right Stuff designs and sells a variety of nodal slides. Purchase GP-CB alone or as a package with MPR-CL II (our most popular nodal slide). Mount nodal slide in clamp and secure with Lock Knob.

Gigapan EPIC Pro shown above with Really Right Stuff GP-CB and MPR-CL II nodal slide.
