SVS AS-EQ1 SubEQ Software Version 3.2:

New Features

SubEQ 3.2 includes new features and bug fixes from SubEQ 3.1. These include:

• Support for Windows Vista 64-bit OS. This extends formal Windows platform support to include XP SP2+, Vista-32 bit and Vista 64-bit. Windows 7 32/64 is currently being certified and early tests indicate no issues.

• Updated Level Measurement Method. The Level Matching function now uses the "C-weighted Leq method" and supports a Reset button. Leq is essentially a running average of the sound level as calculated over the measurement period.

• A new Level Matching procedure for both Audyssey MultEQ-equipped and non-Audyssey Receivers and Processors.

• Updated firmware for AS-EQ1 DSP.

• Filter resolution doubled over previous firmware.

• Certificate graphing bug fixed in Vista.
