### DPE30301 Power Stroke Internal O-Ring Insertion Tools

In May **DIPACO** introduced the **DPE30300** (see Product Information Bulletin FI-84) insertion tool for installing the center external o-ring on Power Stroke injectors. We now have available **DPE30301**, a kit for installing the two internal o-rings onto the piston body in Power Stroke injectors. If you are rebuilding Power Stroke injectors, you need this kit.

The **DPE30301** consists of two precision machined cones. The smaller cone is used to insert the smaller o-ring in the top of the piston body. The larger cone is used to install the bottom o-ring in the piston body. The driver tool in the **DPE30300** kit can be used to make installing the bottom piston body o-ring easier.
