

## Coding For 2004 - 2006 Sprinter Van Injector

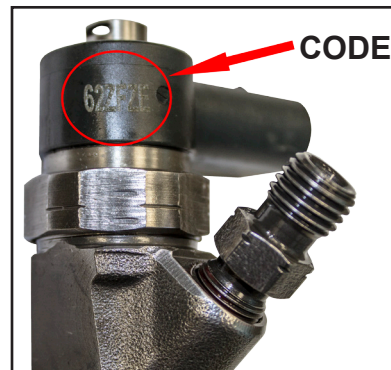

**DT270002R**

The DTech DT270002R injector used on the 2004 - 2006 Sprinter Van is marked with a six digit alphanumeric code that must be entered into the ECM during the installation process using a DRBIII®.

Each DTech DT270002R injector is remanufactured to specific fuel delivery specifications. However, there are very small variations in the fuel delivery characteristics from injector to injector. For the 2004 - 2006 Sprinter application the fuel delivery characteristics are coded on each injector with a six digit alphanumeric code such as 7BR3K1. The ECM uses this code to set a fuel delivery baseline for each injector.

When a DT270002R injector is installed, the injector's code must be entered into the ECM or the engine operation will be affected.

DTech relocates the code from the top of the injector stator to the side of the stator as shown in the picture below.

### Injector Coding Procedure

1. Turn ignition switch ON.
2. Using a DRB III® select ENGINE then MISCELLANEOUS.
3. Select LEARN INJECTORS.
4. Using the up and down arrows, scroll to the appropriate injector.
5. Using the right and left arrows, set injector to proper code.
6. Once injectors are coded, cycle ignition to complete.

*See Product Bulletin FI-295 for more information about DTech injectors for Sprinter applications.*
