

## Torx Bits

---

DIPACO Product Information Bulletin FI-113, May 2002, introduced our DPE99051 Torx Bit Kit. We now have available two more Torx bits.

The first bit, **DPE99052**, is the 5 point T10 size used in Cummins applications and is used on the PT fuel pump throttle lever cover and the TMD adjusting screw cover. The second bit, **DPE99053**, is the 5 point T15 size used in Stanadyne applications and is on the timing window cover and torque screw. Both bits can be used with the driver included in the **DPE99051** kit.

*The anti-tamper 5-point capscrews are used to meet U.S. federal regulation requiring fuel systems to have a greater resistance to tampering. These tools should only be used to assemble, repair, or adjust fuel systems according to factory specifications.*
