

D3080837 Gear Pump Gasket Improvement

DIPACO has made a product improvement to the **D3080837** gear pump gasket used on Cummins PT and Celect pumps. The original **D3080837** gasket used an OE gasket material on the steel carrier. This hard material could have problems sealing when the gasket sealing surfaces on the main pump housing or gear pump were of a low quality. The **D3080837** gasket sealing capacity has now been improved by use of a more compliant material with the steel carrier. The new **D3080837** gasket will reduce the occurrence of fuel leaks when used with housings and gear pumps with poor quality gasket sealing surfaces.
