

## Caterpillar New Scroll Fuel System Governor Update Parts

---

This bulletin covers the **DIPACO** parts available to update Caterpillar new scroll governors for increased durability and reliability.

### **WEIGHT CARRIER**

All new scroll governors should be updated with a **D8N2511** weight carrier that incorporates stops to limit weight travel. This carrier prevents excessive weight travel that is possible under certain operating conditions that result in damage of the governor components and intermediate governor housing. The **D6N7265** governor flyweight shield is not used with the **D8N2511** weight carrier.

### **GOVERNOR WEIGHTS**

The new governor weight **D119-8699** replaces the former weight **D7N7264** in all new scroll governors. The **D119-8699** weight must be used with governor race **D133-8890** (two required) in place of the **D7E4892** or **D4N2927** race. The **D7N7264** weight is still available for use in 3406B/C timing advance assemblies.
