

Ceramic Check Ball for Cummins Select Injectors

The ceramic check ball for Cummins Select injectors, part number **D3076068**, is now available from **DIPACO**. This check ball is found inside the check cage which sits between the spring cage and the plunger and barrel in the injector. Over time the check ball can become out of round, which causes low fuel delivery.

The view below shows the location of the check ball and the check cage assembly in the injector.
