

Springs for Cummins Select Injectors

DIPACO has available the nozzle pressure spring and plunger and barrel bias springs for Cummins Select injectors. The nozzle pressure spring is part number **RTF26101**.

There are two bias springs available, part number **RTF26100** and **RTF26123**. **RTF26100** has an inside coil diameter of 0.254" while the **RTF26123** has an inside coil diameter of 0.188". The shape of the metering plunger and timing plunger in the injector determine which bias spring to use.

Below are representations of shape of the plungers. In the example on the left, each plunger has a protruding area at the end of the plunger, which requires using the **RTF26100** spring. The example on the right shows then plunger ends with recessed areas, which requires the **RTF26123** spring.
