

Pop Test Adapter for Detroit Series 50 and 60 Injectors

In **DIPACO** Product Information Bulletin FI-166 we announced the availability of the spring cage and spring seat for Detroit Series 50 and 60 injectors. Also, **DIPACO** Bulletin FI-157 lists the tips available for these injectors.

In order to test the valve opening pressure of a Detroit nozzle without having to assemble the complete injector, **DIPACO** has available a nozzle pop test adapter, part number **RTF26201**. In order to test a nozzle using the adapter, place the spacer, check cage, pressure spring, spring seat, spring cage, and nozzle on the pop test adapter and then install and tighten the nozzle nut.
