

Ford 6.4L Power Stroke Injector Mounting Kit

DTech now offers a injector mounting kit, part number DT640004, for the 6.4L Power Stroke injector. The kit comes standard with our remanufactured 6.4L injector, part number DT640001R, or can be individually purchased. The kit includes the high-pressure injection line, injector body o-ring and the nozzle washer.

The high-pressure injection lines on the 6.4L must be replaced with new anytime they are loosened or removed. Failure to replace a line will result in fuel leaks and engine oil dilution. See Product Information Bulletin FI-302 for information on the critical injection line nut tightening procedure.

Both the nozzle washer and body o-ring must be replaced every time an injector is removed. Failure to replace these parts may result in dilution of the engine oil with fuel and / or combustion blow-by.
