

Pop Test Adapters for Various Electronic Unit Injectors

DIPACO has available a range of pop test adapters for testing nozzle valve opening pressure and spray pattern without having to assemble the complete injector.

In order to test a nozzle using an adapter, generally assemble all of the appropriate components onto the pop test adapter then install and tighten the nozzle nut.

Below are the pop test adapters currently available for electronic unit injectors. Pop test adapters are also available for Cummins Celect injectors (see **DIPACO** Product Information Bulletin FI-165) and Detroit Series 50 and 60 injectors (see **DIPACO** Product Information Bulletin FI-167).
