

Wiring Harness and Wiring Harness Parts for Cummins Celect Injectors

In **DIPACO** Product Information Bulletin FI-163 we announced the availability of the complete wiring harness for Cummins Celect injectors. Product Information Bulletin FI-176 announced the availability of individual repair parts for the connector side of the wiring harness.

DIPACO now also has available the cover for the solenoid side of the wiring harness, part number **RTF26125-5**.

The part number for the connector harness is **RTF26125**. The **DIPACO** harness includes a heavier duty area where the harness connects to the solenoid. The wires are teflon coated and oil safe.

DIPACO also has available the individual components that make up the connector end of the wiring harness. Often the connector will be damaged while the wiring itself (the most expensive part of the harness) is still serviceable. These components will allow you to rebuilt the connector side of the wiring harness. **RTF26125-1** is the connector and seal combination, **RTF26125-2** is the wedge lock, and **RTF26125-4** is a kit containing all three pieces. The seal, part number **RTF26125-3**, is available separately.
