

Cam Follower for Series 60 Injectors

DIPACO now offers the cam follower, part number RTF26239, for Series 60 injectors. This is an essential component to the Series 60 injector as the follower is usually worn by the injector rocker arm and has to be replaced.

It is common to machine the top of the follower to remove the worn area for an improved appearance however; removal of material from the follower is not recommended since it will change the installed plunger position which has a tolerance of ± 0.010 " (0.25mm). It can also reduce the thickness of the hard case, resulting in rapid wear during further use.
