

Cold Thaw is a fast acting and efficient deicer for the most demanding ice and snow conditions. When used as directed, it can safely be used near lawns, shrubs and other plant life. Special additives minimize flaking and pitting on cured concrete and reduce corrosive damage to metal parts. Authorized by USDA for use in federally inspected meat and poultry plants.

#### DIRECTIONS

Read Safety Datasheet before using this product.

Remove as much snow and ice as possible before application. Sprinkle uniformly at the rate of 1-4 pounds per 500 square feet, depending on the amount of snow and ice remaining. If applied at the beginning of the snow fall or freeze it will make the removal easier. Apply uniformly and do not use in excessive quantities. Excessive amounts can cause injury to plant life, concrete or metal parts.

**Concrete Cautions:** Do not use on concrete that is less than one year old or that was not properly mixed, finished or cured. In these situations, flaking may occur with the use of any ice melting product on substandard concrete. If the concrete meets the recommendations of the committees of the American Concrete Institute, then COLD THAW can safely be applied as instructed.

For Industrial and Commercial Use Only.
